Copies may be purchased by calling Best Copy and Printing Inc., (BCPI), 445 12th Street S.W., Room CY-B402, Washington, D.C. 20554, telephone 800-378-3160, facsimile 202-488-5563, or via e-mail at fcc@bcpiweb.com. The report can also be downloaded from the Wireline Competition Bureau's Statistical Reports Internet site www.fcc.gov/wcb/stats.

Telecommunications Industry Revenues

This report provides an overview of U.S. telecommunications industry revenues and contributions to the universal service support mechanisms. The last report was released March 1, 2005. Most of the data for 2004 are taken from April 1, 2005 filings of annual Telecommunications Reporting Worksheets (FCC Form 499-A). Revenue data collected on these worksheets are utilized in the Commission's administration of the universal service fund (USF), Telecommunications Relay Service (TRS), North American Numbering Plan (NANP) and local number portability (LNP) programs. FCC Form 499-A data also are used to calculate common carrier regulatory fees. Preliminary 2005 totals presented in Table 1, and 2005 and 2006 shares of universal service contributions by principal type of contributor presented in Table 12, are based on filings of quarterly Telecommunications Reporting Worksheets (FCC Form 499-Q).

In 2004, the industry reported \$292 billion in telecommunications service revenues, a slight increase from 2003's \$291 billion. Industry sector data include:

- The pace of revenue growth for the wireless industry remained strong. Wireless industry revenues grew 10% during 2004, from \$90 billion to \$99 billion. See Table 2.
- Filers reported \$122 billion of local service revenues for 2004, down 2% from \$124 billion in 2003. See Table 2.
- Revenues for incumbent local exchange carriers (ILECs) for all services decreased to \$105 billion in 2004, down 4% from \$109 billion in 2003. See Table 3. These carriers reported \$100 billion of local service revenues in 2004. See Table 7. This is 3% lower than the local service revenues shown in last year's report.
- Non-ILEC providers of local services, including competitive local exchange carriers (CLECs), wireless carriers and toll carriers, reported \$21 billion of local service revenues in 2004. See Table 7. This is 6% higher than the local service revenues shown in last year's report.
- Total toll service revenues continued to decline during 2004 from \$77 billion to \$71 billion. See Table 2.

The data for 2004 were consistent with recent trends.

• Chart 1 illustrates that overall telecommunications revenues have been relatively constant since 2000. The chart shows how the wireless service share of the industry has grown rapidly while the toll service share of revenues has declined.

¹ Industry Analysis and Technology Division, Wireline Competition Bureau, Federal Communications Commission, *Telecommunications Industry Revenues: 2003* (rel. March 1, 2005).

• Chart 2 illustrates how the share of universal service contributions by principal type of service provider has changed dramatically since 1997. Consistent with changes in revenues, the toll carrier share of contributions declined from over 80% in 1980 to under 40% today.

USF, TRS, NANP and LNP rules prohibit the fund administrators from releasing company-specific information contained in FCC Form 499-A and FCC Form 499-Q worksheets. Revenue data for individual filers are not available to the public.

End-User Telecommunications Revenues

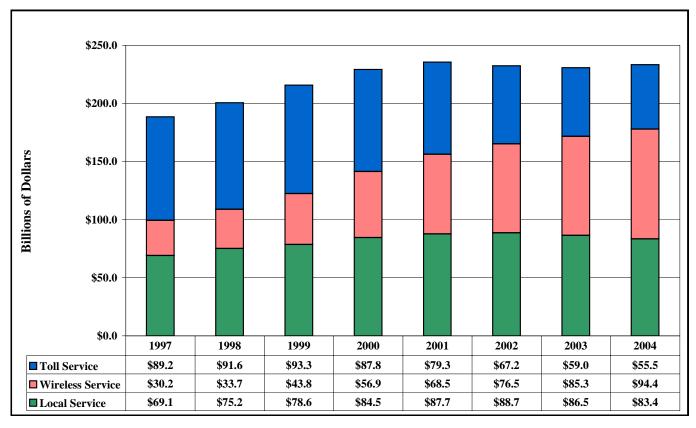

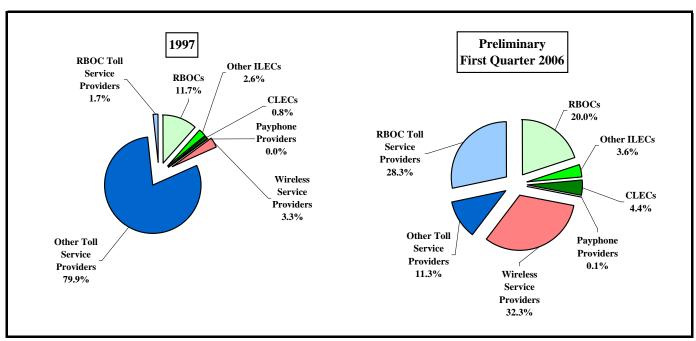

Chart 2 Share of Universal Service Contributions By Principal Type of Contributor

Note: AT&T and MCI are included as RBOC Toll Service Providers for the first quarter of 2006.

FCC Form 499-A Filing Requirements

Virtually all providers of telecommunications must file FCC Form 499-A each year.² Telecommunications Reporting Worksheets are not filed directly with the Commission but rather with the Universal Service Administrative Company (USAC), which serves as the data collection agent. While the annual worksheets were due April 1, 2005, some providers filed late or submitted revised filings after that date. Year 2004 data do not include information from filings received after October 20, 2005 or information from filings that were incomplete.

FCC Form 499-A asks each filer to report total, interstate and international revenues in two broad categories: those billed to universal service contributors for resale (carrier's carrier revenues); and, those billed to *de minimis* telecommunications providers and end users (end-user revenues).³ Filers must provide further breakdowns of local, wireless, and toll services. The form also asks each filer to choose the communications business that best describes its operations:⁴

- All Distance Service Provider
- Coaxial Cable Local Exchange Service Provider
- Competitive Access Provider (CAP) or Competitive Local Exchange Carrier (CLEC)
- Cellular, Personal Communications Service (PCS) and Specialized Mobile Radio (SMR) Wireless Telephony Service Provider
- Incumbent Local Exchange Carrier (ILEC)
- Interexchange Carrier (IXC)
- Local Reseller
- Operator Service Provider (OSP)
- Other Local Service Provider
- Other Mobile Service Provider
- Other Toll Service Provider

² There are certain exceptions. Providers that offer telecommunications for a fee exclusively on a non-common carrier basis are not required to file if their total annual contribution to universal service would be less than \$10,000. Government entities that purchase telecommunications services in bulk on their own behalf, public safety and local government entities licensed under Subpart B of Part 90 of the Commission's rules, entities providing interstate telecommunications exclusively to government or public safety entities, broadcasters and various non-profit entities are not required to file. Finally, systems integrators that derive less than 5% of their systems integration revenues from the resale of telecommunications and entities that provide services only to themselves or to commonly owned affiliates need not file.

³ Telecommunications providers are considered *de minimis* and thus are not required to contribute to universal service (or file FCC Form 499-Q) if their annual contributions to universal service would be less than \$10,000. For universal service contribution purposes, underlying service providers treat *de minimis* firms as end users.

⁴ The detailed definitions of the filer categories are contained in section III.A of the *Instructions to the Telecommunications Reporting Worksheet, FCC Form 499-A* available at www.fcc.gov/Forms/Form499-A/499a.pdf. Filers identified as All Distance or Coaxial Cable Service Providers have been re-categorized for the purpose of creating summary statistics.

- Paging and Messaging Service Provider
- Payphone Provider
- Private Service Provider
- Prepaid Calling Card Provider
- Satellite Service Provider
- Shared-Tenant Service Provider
- Specialized Mobile Radio Dispatch
- Toll Reseller
- Wireless Data Service Provider

FCC Form 499-A filers are instructed to report amounts actually billed to customers. This means that filers should report revenues net of discounts, but without making adjustments to reflect uncollectible revenues or international settlement payments or receipts. Most filers should be able to report revenues in this manner using information contained in their corporate books of account. Some service providers, however, have no business or regulatory requirements to record intrastate or international revenues separately from interstate revenues, or to use the detailed revenue categories contained in the worksheets. In addition, many wireless providers use the interim safe harbor percentages to estimate the interstate portion of their revenues. Most filers

FCC Form 499-A filings sometimes contain mistakes. Initial examination of the data occasionally reveals carrier types, revenue amounts and/or revenues reported in service categories inconsistent with the known operations of the filer. Some corrections have been made based on supplemental filer information. Nonetheless, disaggregated data are likely to be less accurate than industry totals.

Summary Tables

Table 1 shows the major components of telecommunications revenues for 1997 through 2005. This table was created by aggregating the revenues in the major service classifications designated on FCC Form 499-A. FCC Form 499-Q data was used to provide preliminary figures for 2005.

Tables 2 and 3 provide a more detailed look at annual industry revenues over time. Generally, FCC Form 499-A revenue data can be tabulated in two distinct ways: by type of service provided and by type of business. **Table 2** categorizes revenues by type of service and shows, for example, that carriers reported \$98.6 billion in wireless service revenues for 2004. This total includes wireless service revenues from some carriers that are not identified as wireless carriers. In

⁵ Filers began to provide some information on uncollectible revenues starting with the February 1, 2003 FCC Form 499-Q filing. Beginning in the second quarter of 2003, contributions have been based on projected collected revenues, rather than billed revenues from a prior period.

⁶ See the *Instructions to the Telecommunications Reporting Worksheet, FCC Form 499-A* section III.C.3. available at www.fcc.gov/Forms/Form499-A/499a.pdf.

contrast, **Table 3** shows that wireless service providers reported total revenues of \$98.4 billion in 2004, including some revenues for fixed local and toll services.

Revenue data for 1994 through 1996 were summarized from information filed on TRS worksheets. Revenue data for 1997 and 1998 were derived by combining TRS worksheet and universal service worksheet data. Starting with 1999, revenue data were summarized from FCC Form 499-A, which replaced both the TRS and universal service worksheets. Because of reporting changes, data for 1997 forward are not entirely consistent with data for prior years. For example, *special access* revenues were included with *other access* revenues prior to 1997 but have been included with *local private line services* since then. Similarly, through 1996, filers reported as *other local and mobile* revenues substantial amounts of customer premises equipment, billing and collection, and other types of revenues that are excluded from contributions to universal service. These revenues are now reported as *non-telecommunications* revenues. Both tables contain estimates of non-telecommunications revenues that had been reported in prior years. Based on staff estimates, the 1996 telecommunications revenues reported on TRS worksheets would have been \$10.5 billion lower if revenues had been reported using current instructions.

There are some inconsistencies as a result of changes in universal service worksheets. For example, filers were required in 1997 to include inside wiring maintenance revenues as part of local exchange revenues. In 1998, filers were instructed to report these revenues as non-telecommunications service revenues. The local exchange service revenue data in Table 2 would show a greater increase from 1997 to 1998 if the same reporting instructions had been used for each year. Note also that each year, many filers erroneously report substantial amounts of *switched toll* revenues as *other long distance* revenues. The data are examined and some revenues are reclassified based on staff research. Even so, the *other long distance* category of Table 2 probably continues to contain some *switched toll* revenues, perhaps significant amounts in some years.

Changes in reporting procedures may have caused some of the large increase in non-telecommunications revenues that occurred in 2002. Prior to 2002, each legal entity providing telecommunications was required to file separately. Starting in 2002, entities meeting specific conditions were allowed to file on a consolidated basis. For some companies, the books at the consolidated-entity level include substantial amounts of non-telecommunications revenues for legal entities that do not individually provide telecommunications and therefore would not be required to file on an individual basis. Their revenues, however, must be included when filings are made on a consolidated basis because the revenues are recorded on the consolidated books.

Table 4 illustrates how data from the FCC Form 499-A are used to develop funding bases for USF, NANP, LNP and TRS contribution mechanisms. Each of the four programs is supported by a slightly different group of telecommunications providers under slightly different rules. As noted above, providers are considered *de minimis* for USF purposes if their annual contribution is expected to be less than \$10,000. While such providers are thus not required to file FCC Form 499-Q, *de minimis* status does not exempt service providers from filing FCC Form 499-A because contributions to TRS, NANP and LNP are required regardless of the

expected annual amount. Note also that NANP, LNP, and TRS each draw contributions from a larger pool of providers than does USF. Specifically, all telecommunications carriers in the United States must contribute to meet the costs of NANP (47 C.F.R. § 52.17), and all telecommunications carriers that provide service in areas covered by the regional LNP database must contribute to meet the costs of LNP (47 C.F.R. § 52.32). Thus, only those providers that are not carriers are not required to contribute. Cost recovery for TRS is slightly different. Every carrier providing interstate services must contribute to the TRS Fund (47 C.F.R. §64.604 (c)(5)(iii)(A)). In this case, providers that are not carriers, and carriers that do not provide interstate services are not required to contribute.

Table 5 provides a detailed breakout of revenues for each of the FCC Form 499-A revenue categories used to report services provided to other filers for resale. **Table 6** displays similar detail for each of the revenue categories used to report telecommunications service provided to end users. **Table 7** combines data from Tables 5 and 6 with data on non-telecommunications revenues to develop total industry revenues. **Table 8** provides more aggregated revenue information by type of filers. The revenue categories presented in Tables 5 through 7 are explained in the FCC Form 499-A filing instructions.

Table 9 presents an estimate of average revenue per conversation minute. Based on the methodology in Table 9, Commission staff estimated that end users were billed an average of 7 cents for each minute of interstate and international toll calling made during 2004. The average price for each interstate domestic conversation minute was estimated to be 6 cents during 2004. These estimates and year-over-year changes in these estimates should be treated with great caution for a number of reasons. For instance, terminating access minutes are used as a proxy for billed conversation minutes. In certain cases, the two measures track each other closely. Subscriber toll-free calls that terminate on dedicated access lines and some other classes of calls generate access minutes that are billed as terminating minutes only. Some calls, however, generate originating access minutes only or bypass ILEC switched facilities on both ends and therefore generate no access minutes. Some subscriber toll-free calls, on the other hand, do not terminate on dedicated access lines and therefore may generate two terminating access minutes per conversation minute.

Additionally, since 1999, NECA filings report total access minutes without separating originating and terminating minutes. The totals are allocated based on carrier common line (CCL) minutes reported in access tariff filings by ILECs that are subject to price-cap regulation and in the NECA pool access tariff filings. Further, some toll calls handled over voice over Internet Protocol (VoIP) networks may terminate via local minutes rather than interstate access minutes. On balance, the assumptions underlying the estimates probably result in an upward bias in the revenue per minute estimates. For 2004, the staff estimates that revenue per minute estimates may be overstated by as much as 20%.

.

⁷ See Instructions to the Telecommunications Reporting Worksheet, FCC Form 499-A, Figure 3 at 31, available at http://www.fcc.gov/Forms/Form499-A/499a-2005.pdf.

The methodology presented in Table 9 mitigates some problems associated with using terminating access minutes as a proxy for conversation minutes. For example, some conversation minutes do not result in ILEC access minutes because they terminate on the facilities of CLECs. These carriers do not report access minutes. Table 9 presents estimates of these minutes based on CLEC shares of local service revenues. These amounts are used to adjust terminating access minutes.

Moreover, the methodology presented in Table 9 adjusts terminating access minute totals to better reflect international traffic. International settlement minutes are reported based on the billing status of calls rather than where the calls actually originate. Thus, some U.S. billed calls actually originate in foreign points and vice versa. However, most U.S. billed calls originate in the United States and generate originating but not terminating access minutes. These minutes are added to the reported totals for terminating access minutes so that terminating access minutes better represent conversation minutes. Similarly, foreign billed minutes, which usually generate terminating access minutes, are removed from the terminating access minute total.

One category of U.S. billed international calls merits special treatment. *Country-direct* and country-beyond calls are placed from foreign points, directly with U.S. carriers. Countrydirect calls generally originate overseas and terminate in the United States. Such calls are billed by U.S. carriers, generate settlement payments to foreign carriers, and are reported in section 43.61 traffic data reports as U.S. billed calls. Country-beyond calls are similar, but both originate and terminate at foreign points. Country-direct calls result in terminating access minutes. Country-beyond calls generally do not. Unfortunately, section 43.61 data do not separate country-direct from country-beyond calls. This is not a problem for allocating originating access minutes between interstate and international calls, because neither type of call results in appreciable originating access minutes. In estimating interstate terminating access minutes, however, staff chose to subtract country-direct and country-beyond minutes. This means that the number of total interstate terminating minutes, which is used to represent interstate conversation minutes, is biased downward. Staff did not include country-direct or country-beyond minutes with international conversation minutes because country-beyond revenues are reported separately as international-to-international service revenues on FCC Form 499-A and are therefore subtracted when calculating international revenue per minute. Countrydirect revenues, however, remain in the revenue base but the corresponding minutes have been removed from the estimate of international conversation minutes. This bias may be offset by the fact that many international-to-international calls generate U.S. billed settlement minutes and are counted as conversation minutes.

An increasing share of switched traffic either originates or terminates on wireless telephones. Some wireless minutes and some wireless revenues are included in the revenue per minute calculations. Terminating access minutes include calls that originate on a wireless telephone and terminate on a wireline telephone, but do not include any calls that terminate on wireless telephones. Switched revenues include all long distance charges that are itemized on wireless customers' bills but do not include any portion of revenues reported as wireless monthly service or airtime charges. Many interstate wireless calls are billed under "bucket of minutes"

plans and have no explicit toll charges associated with them. Staff does not have sufficient data to assess whether inclusion of some wireless toll minutes and some wireless carrier revenues results in an upward or downward bias in the revenue per minute calculations.

Many LECs also offer service bundles that provide toll calling without generating any separate per-minute toll charges. These carriers allocate a portion of monthly plan revenues as toll charges. Some LECs transfer this toll revenue to affiliated toll carrier books and those toll carriers report the revenues as switched long distance service revenue. Other carriers, however, report all of their monthly service revenues as local exchange service revenues. Where such revenues could be identified, they were reclassified to toll service for the purpose of creating roll-up statistics. Thus, the revenue-per-minute estimates are based on both minute and revenue data that includes LEC bundled service offerings.

End-user switched toll revenue data also are problematic for other reasons. Through 1996, the figures shown are based on TRS gross revenue data. In order to translate reported gross revenues to end-user revenues, 80% of revenues reported by toll resellers were netted from the total. A second problem is that in some years, filers classified substantial amounts of switched service revenues as (non-switched) *other toll*. While significant effort has been devoted to identifying and reclassifying these amounts, the *other toll* category shows a \$1.3 billion drop from 1997 to 1998, which suggests that the 1997 figure may still contain significant amounts of misreported switched service revenues.

Starting in 1998, many toll carriers used fixed monthly charges to recover account maintenance, ILEC presubscribed interexchange carrier charges (PICCs), and both federal and state universal service contributions. Some toll carriers reported some of these surcharges as local service tariffed PICC charges. An attempt was made to identify these amounts and include them with switched toll revenues. Some filers bill customers percentage surcharges to recover universal service contributions. While filers must separately identify the universal service surcharges on their universal service worksheets, it is not possible to identify a precise amount that is attributable to interstate toll service. The Table 9 adjustments to reflect both PICC and universal service costs and end-user charges should be taken as approximate.

Table 9 also shows a number of assumptions that were made in order to separate international revenue data from interstate revenue data. Filers did not separately report end-user revenues for international services for years before 1999. For 1999 and 2000, it appears that many FCC Form 499-A filings understate international revenues and overstate interstate revenues. This could happen if, for example, a filer split revenues between interstate and international service based on a ratio of interstate to international minutes, rather than on actual billings. This would not reduce contribution requirements for the filer but does make the breakout shown in Tables 5, 6, and 7 less reliable. For 2001, carriers reported \$1.5 billion more international revenues in FCC Form 499-A filings than they did in section 43.61 filings. The section 43.61 international traffic data appears to be more reliable, but lacks breakouts of carrier's carrier and end-user revenues. Based on staff analysis of the FCC Form 499-A data, a simple methodology is used to convert section 43.61 international traffic revenue data into

estimates of international end-user revenues for message telephone service. The same methodology is used in all years.

While the Commission does collect detailed international traffic data, there is no clean match between categories of minutes actually reported and the international service end-user revenue data presented in Table 9. The amounts of international-to-international revenues are estimated for 1996 and earlier. Also, an increasing amount of international traffic is being carried on resold private lines and via other new arrangements. It seems likely that much of this traffic is not being properly reported in traffic data reports. For these reasons, the breakout between interstate revenues per-minute and international revenues per-minute is likely to be significantly less accurate than the combined estimate.

Table 10 presents an estimate of average revenue per conversation minute, net of access and universal service contribution costs. These estimates indicate that access and universal service contribution costs have declined over time, and that revenues per minute net of access and universal service contribution costs have declined over time as well. The table uses the data on minutes developed in Table 9 and therefore has the attendant uncertainties. The analysis also uses international settlement payment data which, while relatively good, include settlements associated with international-to-international traffic. The analysis does not account for special access payments from toll carriers to local exchange carriers. In some cases, toll carriers recover the cost of these services through charges that are reported as switched toll revenues and that therefore are reflected in per-minute revenue estimates.

FCC Form 499-A asks filers to identify the share of their carrier's carrier and end-user telecommunications revenues attributable to different regions of the country. **Table 11** shows total end-user telecommunications revenues by region for local, toll and wireless filers. **Table 12** provides data about the relative magnitude of universal service contributions from different classes of telecommunications providers.

Since the second quarter of 2003, universal service contributions have been based on projected collected interstate and international end-user revenues rather than on actual billed revenues from a prior quarter. On the first day of the second month of each quarter, filers report preliminary data for billed revenues from the previous quarter, and project billed and collected universal service contribution base amounts for the upcoming quarter. For example, on November 1, 2005, filers reported data for the third quarter of 2005 and projected revenues for the first quarter of 2006. Far less detail is filed on the quarterly FCC Form 499-Q than on the annual FCC Form 499-A. Revenue detail for the historic quarter includes total, interstate and international U.S. telecommunications revenues, divided into carrier's carrier and end-user categories. For the coming quarter, filers provide only billed and projected collected interstate and international end-user revenues. Roll-ups of the quarterly data are available on the Commission's website at: http://www.fcc.gov/wcb/iatd/lec.html.

Note: Detail may not add to totals due to rounding.

Source: Data for 1997 and 1998 primarily based on FCC Form 457 Universal Service Worksheets, with data from 1997 FCC Form 431 TRS Worksheets used for service providers not required to file a Universal Service Worksheet. Starting in 1999, data summarized from FCC Form 499-A Telecommunications Reporting Worksheets, which replaced both FCC Form 431 and FCC Form 457.

^{1/} Data include revenues for de minimis filers as well as for other carriers that are exempt from universal service contribution requirements.

^{2/} Carrier's carrier revenues are reported on the FCC Form 499-A as sales to other universal service contributors for resale. This includes, for example, access services that local exchange carriers provide to toll carriers. Sales to de minimis resellers, end-user customers, governments, non-profits, and any other non-contributors are treated as end-user revenues. Filers contribute to the universal service funding mechanisms based on their end-user revenues.

^{3/} Payphone revenues are included with local service revenues in this table.

^{4/} Revenues from calls that both originate and terminate in foreign points are reported as end-user revenues, and are included in this table through 2004, but are not included in the universal service contribution base.

^{5/} Preliminary 2005 data are based on FCC Form 499-Q quarterly filings through November 2005. Companies that do not contribute to universal service are not required to make these filings. The quarterly filings include preliminary data for the just closed quarter and projections for the coming quarter, and therefore are not as accurate as the subsequent annual filings. Also, FCC Form 499-Q filers do not separate revenue by type of service. Therefore, revenue totals by service type for 2005 are based on type of filer rather than on data filed by service.

Notes for Table 2.

Note: Detail may not add to totals due to rounding. Some data for prior years have been revised.

- 1/ TRS filers generally reported pay telephone revenues as local service revenues, access revenues or operator toll revenues. The Universal Service and FCC Form 499-A worksheets contain a separate category for payphone coin revenues. Starting in 1997, payphone revenues include payphone compensation received from toll carriers.
- TRS Worksheet filers generally reported special access revenues as access revenues. Reporting changes implemented with the Universal Service Worksheet explain the increase in local private line revenues and the fall in access revenues shown for 1997. TRS Worksheet filers included subscriber line charges with other access charges. Through 1996, these revenues have been disaggregated by assuming that the end-user access revenues in Table 4.2 of *Statistics of Communications Common Carriers* represents 93% of industry total subscriber line charge revenues. Universal Service Worksheet filers report subscriber line charges in a separate category. The increase from 1997 to 1998 represents PICC charges levied by ILECs as well as \$1.2 billion of PICC pass-through charges levied by toll carriers.
- 3/ Significant amounts of enhanced services, billing and collection, CPE and other non-telecommunications revenues were reported in the TRS mobile and other local service categories through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenues reported as mobile and other local revenues were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (then reported as account 5200 and account 5280, respectively) and 10% of amounts reported as mobile service revenues. These amounts have been removed from Other Local and moved to the Non-Telecommunications category.
- 4/ Charges on end-user bills identified as recovering state or federal universal service contributions are reported separately from local, wireless and toll revenues. Reported amounts are apportioned between local, wireless and toll service based on the proportions of local, wireless and toll intrastate and interstate revenues by type of carrier.

Source: Data for 1994 through 1996 summarized from FCC Form 431 TRS Worksheets. Data for 1997 and 1998 primarily based on FCC Form 457 Universal Service Worksheets, with data from 1997 TRS Worksheets used for service providers not required to file a Universal Service Worksheet. Starting in 1999, data summarized from FCC Form 499-A Telecommunications Reporting Worksheets, which replaced both FCC Form 431 and FCC Form 457.

- 1/ Filers are asked to select for themselves a service provider category that best describes their operations. The choices have changed over the years. For example, most satellite service providers identified themselves as other toll carriers in their 1997 FCC Form 431 TRS worksheets because there was no separate category for satellite service providers. Similarly, paging carriers typically identified themselves as other mobile carriers. For 2003 and 2004, some filers identified themselves as all distance carriers. These filers have been reclassified to be consistent with prior classifications.
- 2/ Significant amounts of enhanced service, billing and collection, CPE and other non-telecommunications revenues were reported on TRS worksheets by incumbent local exchange carriers (ILECs) and wireless carriers through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenues reported as mobile and other local revenues were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (then reported as account 5200 and account 5280, respectively) and 10% of amounts reported as mobile service revenues. These amounts have been removed from incumbent local exchange carrier totals.
- 3/ Adjustments include some amounts withheld to preserve confidentiality and revisions made after the initial publication of the data.

Source: Data compiled from FCC Form 431, FCC Form 457 and FCC Form 499-A filings.

Table 4 Contribution Base Revenues By Program 1/: 2004 (Dollar Amounts Shown in Millions)

		2004
	Revenues subject to universal service contribution	
	Interstate and international end-user revenues	\$80,057
less	revenues for international - to - international services	644
less	international revenues of international-only filers and international revenues that were excluded because of the 12% rule $2/$	3,118
less	interstate and other international revenues for 2,606 filers who are <i>de minimis</i> or otherwise exempt from universal service support requirements	66
less	uncollectible contribution base revenues	1,574
equals		\$74,654
	Revenues subject to TRS contribution	
	Interstate and international end-user revenues	\$80,05
less	interstate and international revenues for 114 filers who identify themselves as private service providers or as shared tenent service providers and who therefore are exempt from telecommunications relay service (TRS) contribution requirements if they provide no carrier services	438
less	interstate and international revenues for services provided for resale but reported as end user because it was provided to carriers that do not contribute to universal service support mechanisms	175
equals		\$79,443
	Revenues subject to NANPA and LNP contribution	
	Total telecommunications service end-user revenues (including intrastate, interstate and international)	\$233,322
less	telecommunications revenues for 756 filers who identify themselves as private service providers, shared tenent service providers or payphone service providers and who therefore are exempt from North American Numbering Plan Administration (NANPA) and local number portability administration (LNP) contribution requirements if they provide no carrier services	1,099
less	telecommunications revenues for services provided for resale but reported as end user because it was provided to carriers that do not contribute to universal service support mechanisms	399
equals		\$231,824

- 1/ This table shows how contribution bases differ for different programs and provides relative magnitudes, but does not provide the actual amounts used for determining contribution amounts. Amounts shown represent the amounts contained in the FCC Form 499-A database as of October 20, 2005. The universal service administrator continues to receive additional and corrected filings. Exempt amounts were based on revenues and the filer type information contained in the FCC Form 499-A filings. The fund administrators may use carrier type, revenue type, line 603 exemption certifications and additional information requested from filers to determine which filers must contribute. The universal service fund administrator bills delinquent filers based on estimated revenues and may, in some instances, include estimated revenue amounts in contribution base amounts. Note also that universal service contribution factors are set quarterly based on FCC Form 499-Q filings. FCC Form 499-A data are used for true-up and auditing purposes. Also note that local number portability contribution amounts are determined by region of the country rather than on a nationwide basis. As a result of these factors, actual contribution bases have been based on slightly different amounts than those shown.
- 2/ International revenues are excluded from the contribution base if the total amount of interstate revenues for the filing entity consolidated with all affiliates is less than 12% of the total of interstate and international revenues for the filing entity consolidated with all affiliates. See 47 C.F.R. § 54.706(c). The threshold was increased from 8% to 12% in 2002. See *Federal-State Joint Board on Universal Service*, et al., CC Docket Nos. 96-45, 98-171, 90-571, 92-237, 99-200, 95-166, 98-170, Further Notice of Proposed Rulemaking and Report and Order, 17 FCC Rcd 3752, 3806, para. 125 (2002). In addition, filers that provide only international services are exempt regardless of services offered by affiliates.

^{*} Denotes values greater than \$0 but less than \$500,000.

Revenues are classified by the primary carrier type of each reporting entity. For example, revenues reported by an RBOC affiliate that identifies itself as an IXC are included in the table as IXC revenues. Many LECs provided both local and long distance services as part of package plans. Most of the revenues for the toll portion of these bundles were reported as toll revenues on FCC Form 499-A filings of LEC toll affiliates. Filers identified as All Distance or Coaxial Cable Service Providers have been re-categorized for the purpose of creating summary statistics

^{2/} Telecommunications service provided for resale consists of services provided to other contributors to federal universal service support mechanisms for resale. Revenues from services provided to firms that are *de minimis* under or exempt from federal universal service support mechanisms are reported as end-user service and are subject to contribution requirements.

- 2/ Telecommunications service provided for resale consists of services provided to other contributors to federal universal service support mechanisms for resale. Revenues from services provided to firms that are de minimis under or exempt from federal universal service support mechanisms are reported as end-user service and are subject to contribution requirements.
- 3/ Universal service contribution base revenues consist of all interstate and international end-user telecommunications revenues except for international-to-international revenues reported on Line 412. The totals include revenues from filers who are *de minimis* or otherwise exempt from contributing. This table also includes international revenues that were exempt from contribution because of the 12 percent rule. See Table 4 for details on exempt amounts. Contribution base amounts reported as uncollectible on Line 422 have been removed.
- 4/ Carriers report non-telecommunications service revenues on Line 418. This category includes enhanced services, inside wiring maintenance, billing and collection, customer premises equipment, published directory, dark fiber, Internet, foreign carrier and other non-U.S. telecommunications service revenues.

^{*} Denotes values greater than \$0 but less than \$500,000.

^{1/} Revenues are classified by the primary carrier type of each reporting entity. For example, revenues reported by an RBOC affiliate that identifies itself as an IXC are included in the table as IXC revenues. Many LECs provided both local and long distance services as part of package plans. Most of the revenues for the toll portion of these bundles were reported as toll revenues on FCC Form 499-A filings of LEC toll affiliates. Filers identified as All Distance or Coaxial Cable Service Providers have been re-categorized for the purpose of creating summary statistics

Notes for Table 9.

n.a. - not applicable

Note: Some data for prior years have been revised.

- 1/ Starting in 1997, interstate operator service revenues include interstate and international prepaid calling card revenues (currently Table 6, Line 411) plus revenues from interstate and international operator and toll calls with alternative billing arrangements (currently Table 6, Line 413).
- 2/ Starting in 1997, other interstate switched toll revenues are equal to revenues from interstate and international ordinary long distance and other switched toll services (currently Table 6, Line 414).
- 3/ Starting in 1997, amounts shown are revenues from international calls that both originate and terminate at foreign points (currently Table 6, Line 412). International-to-international revenues were not reported separately prior to 1997. Amounts for 1992 through 1996 were estimated using a 50% growth rate. Most international-to-international services are provided to foreign customers. Some international-to-international services, such as call-back service, generate both originating and terminating access minutes.
- 4/ Carriers only report aggregate universal service surcharge revenues. Such revenues are allocated across services based on the share of contribution base revenues generated by each service.
- 5/ PICC charges were introduced in 1998. The reporting instructions for 1998 data were not clear and many toll carriers reported PICC pass-through charges as local revenues rather than as toll revenues. Carrier-by-carrier information was used to identify misclassified amounts to ensure that the amount of toll revenues for 1998 was accurate.
- 6/ Table 2 of *Trends in the U.S. International Telecommunications Industry* contains estimates of international end-user revenues. Preliminary figures are used for 2004. Note that these figures differ significantly from data contained in Table 6 herein. Table 3 in *Trends in the U.S. International Telecommunications Industry* contains data for country-direct/beyond and reoriginated minutes.
- 7/ Based on National Exchange Carrier Association (NECA) filings. Separate data were available for originating and terminating access minutes through 1998. Beginning in 1999, ILEC total interstate access minutes (*Monitoring Report*, Table 8.1) are allocated between originating and terminating based on the originating and terminating shares of carrier common line (CCL) minutes of use reported by carriers subject to price-cap regulation and all local exchange carriers in the NECA pool (see *Trends in Telephone Service*, Table 1.4. The May 2004 edition contains data for 2003.) These figures exclude the minutes of rate-of-return ILECs.
- 8/ CLEC access minutes are estimated based on the local service competitors share of the local services market. Data taken from Table 8.7 of *Trends in Telephone Service*. That table, reproduced in relevant part below, includes all local service revenues of local carriers, but includes only local exchange service revenues of wireless and toll carriers.

Local service competitors' share of	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004
local revenues	0.4%	0.7%	1.0%	2.3%	3.5%	5.8%	8.8%	11.8%	12.1%	15.0%	15.8%

- 9/ World total MTS minutes billed in the United States from Section 43.61 International Telecommunications Data includes data for all U.S. points, all settlement arrangements and all U.S. carriers. Billing types covered are 1, 11, and 21. (See the International Data report for an explanation of billing types.) Starting in 1995, carriers separately reported country-direct/beyond minutes. Most country-direct traffic generates terminating access minutes and generally represents billed end-user revenues from U.S. customers. Country-beyond minutes generally do not result in access minutes and generate revenues that are reported as international-to-international. Some other international-to-international traffic, however, results in access minutes and ordinary U.S. billed minutes of traffic. In the absence of better assumptions, and recognizing the offsetting bias for call-back minutes, the country-beyond/direct minutes are treated as terminating access minutes but are not included as international conversation minutes.
- 10/ World total MTS minutes originating or terminating in the United States but billed in foreign countries are from Section 43.61 International Telecommunications Data. Includes data for all U.S. points, all settlement arrangements and all U.S. carriers. Billing types covered are 2, 12, and 22. (See the International Data report for an explanation of billing types.) Foreign billed minutes of international traffic generate terminating access minutes.
- 11/ International conversation minutes are estimated as U.S. billed international traffic minutes excluding country-direct/beyond and reoriginating minutes. Domestic conversation minutes are estimated as domestic terminating access minutes. An unknown quantity of conversation minutes result in reported interstate or international switched toll revenues but not in reported interstate access minutes. This may result in an upward bias in the revenue per minute estimates. For 2002 and 2003, revenue per minute estimates may be overstated by as much as 10% or 20%.
- 12/ International revenue per-minute amounts published herein differ from estimates published in *Trends in the U.S. International Telecommunications Industry*, Table 2, because the latter estimates include revenues and billed minutes associated with calls that originate and terminate at foreign points.
- 13/ Reorigination traffic originates and terminates outside of the United States. U.S. carriers receive settlement-like payments for this service which are reported as U.S. billed revenues in 43.61 reports. For FCC Form 499 reporting, these amounts are treated as settlements and not reported as revenues. Reorigination data are taken from Table 3 in *Trends in the U.S. International Telecommunications Industry* and from *Section 43.61 International Telecommunications Data*.

See notes on next page.

Notes for Table 10.

Note: Some data for prior years have been revised. Some 2004 international data are preliminary. See text for additional commentary.

- The number of conversation minutes is based on the number of access minutes. An unknown quantity of conversation minutes result in reported revenues but do not result in interstate access minutes. Therefore, the analysis may overstate average access and universal service contribution costs per minute. Note that the end-user revenue per-minute data taken from Table 9 includes revenues from universal service pass-through charges levied on end users by filers to recover contribution amounts.
- Originating and terminating per-minute charges are derived from data in Table 1.2 of *Trends in Telephone Service*. Charges for the year are calculated as charges for the first and second half of each year, weighted by the actual access minutes for the respective halves.
- 3/ Access cost per average conversation minute is calculated as the total cost of originating and terminating access (based on ILEC but not CLEC access minutes and costs per minute shown in the table) divided by conversation minutes. For example, for international minutes, originating access minutes equal the U.S. billed international minutes excluding country-direct/beyond minutes and hubbing minutes. Similarly, terminating access minutes equal the number of foreign billed minutes plus country-direct/beyond minutes. Ideally, country-direct minutes would be treated differently from country-beyond minutes, but Section 43.61 international traffic data reports do not contain that breakout. For simplicity, all CLEC minutes are treated as domestic access minutes.
- 4/ Source: National Exchange Carrier Association (NECA). Through 1997, toll carriers were assessed based on the number of presubscribed lines.
- 5/ Through 1997, universal service contributions per minute were calculated as the assessments based on lines divided by all U.S. conversation minutes. Starting with 1998, the amounts are estimated as the approximate contribution rate for interstate and international revenues times the average per-minute charges.
- 6/ Interstate access per-minute revenues reported on FCC Form 457 and FCC Form 499-A by carriers other than ILECs.
- 7/ Section 43.61 International Telecommunications Data. Totals exclude settlement payouts for hubbing service. Net international settlement payouts have been reduced by the ratio of international-to-international service revenues to total international end-user revenues, reflecting the assumption that these revenues cause a proportionate share of net settlement payouts.
- 8/ Since 1998, Tier 1 incumbent local exchange carriers were allowed to recover a portion of interstate expenses through presubscribed interexchange carrier charges (PICCs) on access lines. Where the access line was presubscribed, the PICC was levied on the interexchange carrier (IXC) and the associated revenues were reported as carrier's carrier revenues. The PICC charges shown in the table are based on Tier 1 carrier charges as well as line count information from Tariff Review Plans and from the Statistics of Communications Common Carriers. Where consumers did not have a presubscribed IXC, however, the ILEC billed the PICC charge to the customer rather than the IXC. We estimated that 97% of ILEC PICC revenues were collected from IXCs. Note that PICCs on residential and single line business lines were eliminated on July 1, 2000 and that PICC charges largely have been phased out for other lines.
- 9/ Includes tariffed per-minute access charges, net international settlement payouts, universal service contributions and PICC charges but excludes the cost of dedicated access lines.
- 10/ The net cost of settling international traffic consists of the settlement payouts for U.S. billed traffic less the settlement receipts for foreign billed traffic. The minutes of foreign billed traffic are not included as international conversation minutes because U.S. carriers do not bill U.S. customers for this traffic. U.S. carriers incur terminating access charges for these minutes and international transmission costs. The terminating access costs are included in the cost per-minute estimates. *Trends in the U.S. International Telecommunications Industry* shows end-user revenue per minute handled, as compared to end-user revenue per U.S. billed conversation minute shown herein.

Total All Filers	100.0 %	100.0 %	100.0 %	100.0 %	100.0 %	100.0 %	100.0 %	100 %	100.0 %	100.0 %

^{1/} For years 1997 through 2002, the percentages are based on shares of reported subject interstate and international end-user billed revenues. The percentages shown for 2003 and 2004 are based on shares of reported subject interstate and international end-user collected revenues. Preliminary percentages shown for 2005 are based on FCC Form 499-Q filings. Preliminary percentages for the first quarter of 2006 are based on projected collected revenues for that quarter, from FCC Form 499-Q filings. Calculations exclude revenues for calls that both originate and terminate in foreign points. Calculations for years 1999 through 2003 include revenues for all filers. For the purposes of this table, AT&T and MCI filings are classified as RBOC filings as of the first quarter of 2006.

Source: 1997 and 1998: FCC Form 457 filings; 1999 through 2004: FCC Form 499-A filings; 2005 and 2006: FCC Form 499-Q filings.

^{2/} Prior to 2004, the FCC Form 499-A asked each filer to identify a single category of communications business that best described its operations. The service provider categories listed on FCC Form 499-A correspond to traditional breakdowns of the industry. Starting in 2004, carriers were allowed to specify more than one category and were allowed to identify themselves as an *All Distance* service provider. Revenues from these filers have been categorized using the traditional industry classification that best described each company.

Customer Response

Publication: Telecommunications Industry Revenues: 2004

You can help us provide the best possible information to the public by completing this form and returning it to the Industry Analysis & Technology Division of the FCC's Wireline Competition Bureau.
